

## Let us help you migrate to the Cloud

Norhurst can help you migrate one application or your entire data center to the cloud. Utilizing Corent's comprehensive SurPaas platform, our team of experts will work closely with your team to successfully migrate to a cloud provider of your choice, and we will support your team in optimizing the deployment to meet all your Service Level Agreements (SLAs) with minimal Total Cost of Ownership (TCO).

### Cloud Migration As A Service (CMaaS)

CMaaS is the only solution to maximize cost savings and business agility.

Norhurst is pleased to offer CMaaS through its partnership with Corent Technologies.

## Effective Analysis

### Easy Two Step Process

CMaaS is a tried and tested two-step process that starts with effective analysis. Applications in your data center are analyzed and several reports are created that provide information about workloads, deployment topology, cloud scenarios, cost modeling and SaaSability.

Our team will explain the results and help you choose the best topology and the best value cloud platform.

## Efficient Migration

### We will collaborate with your team

In the second step, applications selected for migration will be shifted from your data center to the cloud platform of your choice (AWS, Azure, Softlayer, etc.) using our migration tools and expert resources.

We will also engage your application administrators to ensure that all of your organizations security, usability standards and SLAs are accounted for and thoroughly tested.

**SurPaaS® Shift Offers 3 Migration Modes**

- **Shadow Shift** (Whole VM Migration)

  - On Prem VMs to Cloud VMs
  - Datacenter Infra migration with many VMs to be migrated
- **Swift Shift** (Application Migration)

  - Original topology to same on Cloud
  - Simple migration or a single application
- **Smart Shift** (Application Migration)

  - Re-topologize App to any new deployment topology on Cloud
  - Great tool for Architects with specific migration objectives
